## **Dutch Ministry of Agriculture Chooses Remedy Interactive Software for Enterprise Health and Productivity Initiative**

**SAUSALITO, CA – July 19, 2010** — [Remedy Interactive](#), Inc., a leader in enterprise software solutions that help organizations provide a safe and healthy workplace, announced today that the Dutch Ministry of Agriculture, Nature and Food Quality purchased Remedy Interactive’s web-based enterprise software [OES Office](#) and desktop ergonomics software [RSIGuard](#) to manage and improve employee health and productivity. With this new agreement and other new customers, Remedy Interactive is the first and only provider in its category to serve government institutions in four countries and corporations in over one hundred countries.

Managers in the Ministry’s Information Technology Department, DICTU, will use OES Office and RSIGuard to measure and monitor the work environment and employee behavior, including the psychosocial workload factors that cause stress and lost productivity. In addition, OES Office and RSIGuard will interact directly with employees by automatically sending personalized prevention resources, encouraging healthy work patterns, and continuously measuring changes in risk factors. This unique process of monitoring and adjusting helps increase employee health and productivity, as well as decrease the costs of absenteeism and presenteeism.

“We place the welfare of our employees first, so we set high standards for health and safety. Remedy Interactive will give us valuable insight about our workforce and show us where we need to make improvements, so we can maintain a safer work environment,” said Edwin Schuchmann, director of DICTU. “In addition, OES Office and RSIGuard both integrate seamlessly with our IT systems and provide a low total cost of ownership.”

“Organizations like DICTU understand the connection between a healthy workplace and reduced absenteeism,” said Erik Andersen, Vice President of Customer and Partner Relations at Remedy Interactive. “Our customers value the use of our unique technology as a more efficient way to reach a distributed workforce, collect actionable information about employee work behaviors, and focus on measureable outcomes. We’re looking forward to working with DICTU in the upcoming years.”

#### **About RIHealth**
