Clayton Teams with Remedy Interactive

NOVI, MICHIGAN - January 8, 2003 - Clayton Services Group, Inc. (www.claytongrp.com), announced that it is now providing clients technological solutions for office ergonomics management through a new relationship with Remedy Interactive (www.remedyint.com). Along with "high touch" consulting services that are the basis of Clayton's ergonomics practice, Remedy Interactive's standardized online system supports large corporate clients in global planning, resource allocation, and data-driven decision making with regard to their ergonomics program. This combination of resources is unique in the Environmental Health and Safety industry.

"I'm very excited about the resources this working relationship will bring to Clayton's clients," said Chris Shulenberger, Clayton's Ergonomics Program Director. "Teaming with Remedy Interactive helps us to offer large clients more flexibility in choosing the comprehensive, global solutions they need. Clayton provides consulting services on both the front-end and back-end of the process. Clayton has assisted several clients by helping them develop their office ergonomic program components and implementation strategies. And for those employees who do have discomfort, Clayton professionals provide individual workstation assessments to identify the issues and recommend improvements.

Clayton and Remedy Interactive first worked together with a mutual client, a major oil company. The client combined Clayton's consulting services with Remedy Interactive's Web-based management system to develop a comprehensive, enterprise-wide Repetitive Stress Injury (RSI) Prevention Plan for its approximately 32,000 computer users worldwide. The data also help management identify the need for additional interventions.

"Companies who choose to work with both Remedy Interactive and Clayton will receive a set of combined services and expertise that ensures a high level of reduction in RSIs and in Worker's Compensation costs. Because of this alliance, Clayton consultants have knowledge about and experience with WorkWell's functionality. This increased knowledge allows the Clayton consultants to provide efficient and directed assistance with follow-up, if needed, with their clients that use WorkWell," said Kimberly Lopez, Chief Executive Officer of Remedy Interactive.

Remedy Interactive's system gathers baseline risk information, racks risk according to employee and job, and confirms that employees complete training. Its product, WorkWell, builds employee awareness of ergonomic issues through a

risk-based self-assessment. Data the employees provide are used to educate them about their risk factors and intervention strategies. The data also help management identify the need for training, tracking, assessments, and interventions – the critical elements of an office ergonomics program.
