**Remedy Interactive Expands Its Suite of Integrated Injury Prevention Software Applications**

**SAUSALITO, CA - April 30, 2004** - Remedy Interactive — whose ergonomic software solutions are installed at more Fortune 1000 companies than any other's — has expanded and tightly integrated its suite of software applications to better meet its clients' needs. The new suite of solutions will be called the Remedy Interactive Office Ergonomics Suite or OES.

"Clients have been telling us they would like us to expand our offering in particular ways. Our newest capabilities offer clients innovative ways to leverage technology to reduce even further their injuries and costs. When we completed the expansion, we made the decision to change the name of our software to better reflect what the new set of options are," said Kimberly Lopez, CEO of Remedy Interactive.

The new Office Ergonomic Suite includes all of the solutions previously available—risk assessment; data collection; automated education, communications and messaging; automated implementation of ergonomics program management; reporting; analytics; and performance management. In addition, following its acquisition of RSiGuard, Remedy Interactive completed a comprehensive integration of an adaptive break agent into the solution set.

This integration creates additional functionality well beyond a typical break application's features. The integration of the RSiGuard software into our suite of solutions allows Remedy Interactive end users to: change behavior by delivering personalized messages through the desktop, measure success of break application implementation, and analyze relationships between risk and human/computer interaction across large populations. The solution allows for the collection of detailed individual work pattern data, and is the first and only solution with web-based capabilities that provide risk managers the ability to view this data in aggregate and in combination with other risk factors. Because of this rich intelligence and its ability to monitor and manage potential risks, this new solution is called the Work Pattern Optimization Tool.
